EWF is part of DIGIWELD project

The aim of this new project is to create an open and innovative digital learning system and education materials.

Embracing the learning challenges of the new digital era is the main goal of the DIGIWELD project, which aims at providing digital tools for education and innovative practices for students from Vocational Education and Training Schools, as well as for welders who want to keep abreast of the new skills and competences required for new welding technologies.

The project's key deliverables throughout its two-year duration include the development of:

- Curricula for training welders using simulators and updating EU Guidelines for the European/International Welder IAB – 089r5 – 14
- Digital tool to be inserted in simulators as modules dedicated to the training of
